

Malfunctions: currents and waves

In 2006 measurements of currents started with the AWAC instrument. Within half hour intervals currents are measured first, for the period of 10 minutes, while surface waves are measured after currents for 1024 sec.

Previously (since Oct 2002) currents were measured for 10 min at the end of half hour intervals.

- ◆ In 2006 measurements started on 11.Jan.2006, those of currents at 20:00 UTC, while of surface waves at 20:05 UTC.
- ◆ First gap of measurements of currents occurred on 29 Apr. 2006 between 10:00 and 10:30 UTC, while of waves between 10:00 and 11:05 UTC.
- ◆ Second gap of measurements of currents happened on 28.Aug.2006 between 10:00 and 14:30 UTC, of waves between 10:00 and 15:05 UTC.
- ◆ Third gap started because of annual maintenance works on buoy on 11.Sep.2006 at 10:30 UTC.
- ◆ Third gap ended on 20.9.2006, when measurements of currents started at 12:00 UTC, while those of waves started at 12:40 UTC.
- ◆ Fourth gap started on 24.9.2006 at 19:00 UTC in ended for currents on 25.9.2006 at 12:00 UTC, while for waves at 12:40 UTC.
